

We want to partner  
with **YOU** to  
understand brain  
development!

Researchers at **Boys Town Institute for Human Neuroscience** are looking for children in Omaha to be compensated for participating in a project about the brain.

### WHY ARE WE DOING THIS?

This project aims to understand how the healthy brain develops. As children and adolescents grow, their hormones and cognitive abilities change dramatically, and we are working to identify those changes. Participants will contribute to the project through a series of brain imaging scans, all of which are harmless and noninvasive. Help make a difference and advance research and get compensated while doing it!

Scan here to sign up.  
Or visit: [diconlab.org/participate](https://diconlab.org/participate)

### IN THIS PROJECT, YOU WILL:

- » Complete two visits
- » Complete MEG and MRI scans
- » Complete brain games
- » Provide saliva samples
- » Complete questionnaires

### CHILDREN WHO ARE ELIGIBLE:

- » Are between the ages of 6 and 17 years old
- » Able to complete up to 5 years

Children will receive a  
3D-printed model of their brain.

There is no cost to you, and transportation and meals will be provided if needed.
